Big Game Rifle

EuroCopper

Hunt with the confidence of all-range accuracy and expansion in a totally lead-free projectile with new Federal EuroCopper. One-piece copper alloy bullet construction prevents fragmentation and ensures nearly complete weight retention for deep penetration. The bullet's resilient polymer tip provides the most consistent ballistics, while grooving on the shank improves accuracy and reduces fouling. EuroCopper is legal for use in areas that require lead-free ammunition and an ideal choice for the full array of medium and large game.

Features & Benefits

- Monolithic copper alloy construction
- Extremely high weight retention for deep penetration
- Precision polymer tip for reliable expansion from low to high velocities
- Perfect projectile for short to medium distances.
- Grooving on the bullet shank improves accuracy and reduces fouling
- Legal for use in areas that require lead-free ammunition
